

CEWELD Powder PTA DUR 6

TYPE Gas atomized spherical Cobalt-Chromium-Tungsten alloy.

ANWENDUNGEN Outstanding alloy against abrasion, thermo-shock and corrosion combined with high temperatures. Dur 6 PTA Powder is the most widely used of the wear resistant cobalt based alloys and exhibits good all-round performance. It is regarded as the industry standard for general-purpose wear resistance applications.

EIGENSCHAFTEN The alloy deposit can be machined with tungsten tool tips and by grinding. The hardness of the deposit will decrease 16% at 300°C and about 30% at 600°C. Excellent alloy against thermal shock, abrasion, erosion, corrosion and cavitation at high temperature and excellent resistance to many forms of mechanical and chemical degradation over a wide temperature range, and retains a reasonable level of hardness up to 500°C (930°F).

KLASSIFIKATION EN ISO 14700: P Z Co2

GEEIGNET FÜR Examples include valve seats and gates; pump shafts and bearings, erosion shields and rolling couples. It is often used self-mated.
