

CEWELD NiFe 55

TYPE Nickel iron MIG wire for joining multiple pass welding cast iron. (NiFe-1, 2.4472)

APPLICATIONS CEWELD® NiFe 55 is suitable for welding mild and low alloy steels which are exposed to temperatures up to 450C. Multiple pass welding of spheroidal graphite cast irons and neutral tempered (black) malleable cast irons. Cast Iron repairs, rebuilding shafts, wheels, critical joints between steel and cast iron etc.

PROPERTIES CEWELD® NiFe 55 is a nickel Iron based filler metal for joint welding and claddings on cast Iron. Very well suited also for dissimilar welding between cast iron and high alloyed stainless and heat resistant steels or mild steels. Excellent Weldability with extreme crack resistance with a ductile weld deposit. Good welding and wetting characteristics and high resistance against porosity. The weld metal is corrosion and heat resistant. Very well suitable for welding with robotics or automated processes.
